

MARS Meeting Room Booking

Introduction

Parsec delivers office productivity applications capable of running on CISCO IP Phones as well as from user desktops. MARS Meeting Room Booking is a Unified Communication Productivity Application which allows users to search, look for provisions and book Meeting rooms in a campus or facility. This application addresses the problem of confusion arising out of multiple groups trying to use the same Meeting room for their requirements.

Features

Users can access MARS Meeting Room Booking through their IP Phones and get confirmations as messages once the Meeting room booking is successful. Cancellation can also be done through IP Phones as well as through PCs. Users are prompted to log into the Meeting room phone for getting a confirmation of usage, unless the Meeting room will be freed for others to book it. Users in a scheduled Meeting will get a buzz before expiring of the Meeting so that they will either close the meeting and move out or else extend the booking time.

Administrators have overriding privileges over normal users and can use a PC to configure and manage the applications. Groups and contacts created in outlook and active directory can be used to send messages.

Benefits

The application streamlines the usage of Meeting rooms and gives a real time statistics of the usage status. Employees will be prepared with all aspects of a Meeting or meeting taken care of and no last minute surprises. For an important meeting the administrator will have rights to modify or cancel the effected bookings and accommodate others. Reports help the management to look at space utilization and take corrective measures related to facility usage.

Supporting Hardware & Software:		
1.	CUCM Supported	4.X, 5.X, 6.X, 7.X,8.X
2.	Phones Supported	7911, 7919, 7920, 7921, 7940, 7941, 7960, 7961, 7970 & Later XML Supported Phones
3.	CUAE	2.5.1 , 8.0
