

MARS Messaging

Introduction

MARS Messaging comes as a stand alone module as well as coupled with other MARS modules. It facilitates organization wide text and voice messaging between employees, management to employees and employees to management. MARS Messaging helps organization to create, distribute and manage enterprise wide messaging in a systematic and efficient manner. Without any additional investment organizations can reach to all the employees with corporate messages which are delivered through a very powerful yet non-intrusive way.

Features

MARS Messaging module supports text messages, voice messages and email messages which is delivered with the lamp glowing and a buzz sound. This module can be configured with other modules to enables system initiated messaging. User initiated messages can be either from the web based MARS administrator console or from individual user phones. The messages can be a broadcast or to a select list of user defined phone extensions. User defined messages can be set in either private or public mode.

Benefits

MARS Messaging enables enterprise-wise communication without any additional infrastructure investments. Employees can send and receive messages through their IP Phones and bulk messaging is done through the administrator console. Managers can communicate directly with their team members and let them know on a regular basis what important is happening in the organization. Selective messaging allows one to one messaging or private group messaging. Through the reporting module administrators can generate reports and analyze the trends of message flow.
