

MARS PC Sync (For EM Users)

Introduction

MARS PC Sync is an utility application which allows synchronization of the user IP Phones with his PC. In real world scenarios maximum users forgot to log onto their phones while coming to the office and log out while not in the desk. PCSync facilitates automatic log-in while the user log into the domain through PC and automatic log out when the user logs out of the domain. If the user locks his workstation for some work than simultaneously the IP Phone is also locked out. In this locked state only incoming calls and some select outgoing calls are only allowed.

Features

PCSync work in a varied combination of ways to facilitate free seating, configurable and auto detect mode. It takes a combination to user id, password and extension number from a new user and allows automatic log-in there afterwards. Administrators can configure the application to work with the Cisco Discovery Protocol (CDP). Where once the user logs into the domain through the PC the nearest IP Phone is identified and the user is automatically logs in.

When the phone is in a locked or logout mode then a different configuration facilitates only select call dialing and incoming calls in the case of the former.

Benefits

By synchronizing extension mobility with domain login the user is protected against unauthorized uses of his voice privileges within the enterprise. A synchronized single sign in to the IPT by employees increases organizational productivity by allowing others to know who all are present and save cost by reducing the chance occurring of unwanted calls.

Supporting Hardware & Software:		
1.	CUCM Supported	4.X, 5.X, 6.X, 7.X,8.X
2.	Phones Supported	7911, 7919, 7920, 7921, 7940, 7941, 7960, 7961, 7970 & Later XML Supported Phones
3.	CUAE	2.5.1 , 8.0
