

MARS Visitor Verification

Introduction

MARS Visitor Verification helps in automating the communication functions of a security desk. In the security desk audio visual communication is a vital function in verifying visitors, and a visual verification of the guest from the intended recipient is the best way to authorize visitors. MARS visitor management working with CISCO Unified Communication Manager facilitates this function and integrates with any third party software. Ideally suited for office environment, residential townships, construction sites or any establishment with centralized security setup.

Features

MARS Visitor Verification uses any webcam and the windows operating environment to capture the image of the incoming visitor and passes it onto the IP phone of the intended receiver. The receiver will get an accompanying message or a beep to indicate that his quick attention is required. Here the recipient can allow access by visually verifying the guest or pass on other appropriate instructions to the security desk. This application integrates with any third party visitor management software as well as can be cross referenced with internal and external databases. After the visitor is authenticated for the first time the information can be stored for quick return processing.

MARS Visitor Verification helps in verifying possible intruder with photo, deny access to disgruntle employees and enforce restraining orders protecting employees and residents. With the help of customizable report printing in various formats and its export feature this allow creating an audit trail and its tracking.

Benefits

MARS Visitor Verification works with the existing CISCO infrastructure and allows integration with third party visitor management software. MARS Visitor Verification converts the IP phones into a powerful medium to visually authenticate visitors as well as facilitate communication. Audit trail and reporting helps in managing and to do trend analysis. This can also be easily deployed in a multi site set up. Residents and employees can send prior information as well as visual image to ensure pre clearance so that important guests can walk in without delay. Regular visitor list speeds up authentication and multi site support helps in one central verification point.

Supporting Hardware & Software:		
1.	CUCM Supported	4.X, 5.X, 6.X, 7.X,8.X
2.	Phones Supported	7941, 7961, 7970 & Later XML & Graphic Supported Phones
3.	CUAE	2.5.1 , 8.0
4.	Web Camera	Logitech
